

Uddrag af interview med doktor i kvantefysik, Dan Nelson, om vandet i Bionaid:

Dan We're talking about those elements being there in the energetic state or being there as there waveform analogue. Water has memory capabilities. Water is capable of holding onto information. Water is the perfect medium for nutrient minerals in the energetic state. If you were to get into a study of how the natural world uses water, you would discover that you can't make gold, you can't make platinum, and you can't make palladium unless you have water. There have to be a number of different waves present in the water. It's what we call in physics the super-positioning of waves. If you have the right complement of waves gold will literally form in water. I know. I've seen it. We've actually done it. We've made gold in water. We've made platinum. We've made palladium.

Elder Can we metaphorically say that you've "grown" it in water?

Dan Yes, grown it in water.

Elder Grown it in water!

Dan From nothing but waveforms.

Elder Okay.

Dan There was nothing but frequencies of a certain number of elements and it had to be the frequency of a particular isotope of those elements. For instance, iron is involved in the production of gold. It's also involved in the production of platinum and palladium. But it's a pre-metallic isotope. It's an unstable isotope that's very comfortable existing in water as its waveform analog. There are isotopes of iron obviously that can never exist as a waveform analog in water. They're metallic.

Elder So I would be incorrect in stating that there are measurable unstable isotopes; there are isotopes that the body utilizes that are actually in an energetic form of a particular unstable isotope.

Dan I defy you to find... a single particle of this particular isotope of. It's not in there as a particle. It's in there as a wave. As energy. This is where you lose most people. I'm talking about making gold. That's where your geologists, your geophysicists and your mining engineers will turn their backs and walk away. Their education does not prepare them for this approach.
